$4^{0.5} \cdot 4^{0.5} = 4^{0.5 + 0.5} = 4^1 = 4$. If we multiply $4^{0.5}$ with itself the answer is 4. Since we know that if we multiply 2 with itself, the answer is also 4. Thus these numbers represent the same thing: $4^{0.5} \cdot 4^{0.5} = 2 \cdot 2 = 4$. $4^{0.5} = 4^{1 \div 2} = 4 = 2$.

To multiply or divide two radicals, the radicals must have the same index number. The product rule dictates that the multiplication of two radicals simply multiplies the values within and places the answer within the same type of radical, simplifying if possible. For example, $\sqrt[3]{2} \times \sqrt[3]{4} = \sqrt[3]{8}$, which
