Niacin is also known to reduce total cholesterol and triglycerides, and to increase HDL. The most common adverse drug effect associated with niacin is peripheral vasodilation that can manifest as flushing, pruritus, warmth, tingling, and orthostatic events.

Publisher Summary

This chapter discusses the adverse effects of drugs that affect lipid metabolism, such as ezetimibe, fibrates, fish oils, 3-hydroxy-3-methyl-glutaryl -CoA reductase inhibitors, and nicotinic acid derivatives.
