Natural Selection Is Not Evolution! The supposed vehicles of evolution are mutations, natural selection, and other mechanisms that—when combined with that pixie dust of time—allegedly led to the development of all life forms present today. However, natural selection merely redistributes or reduces preexisting genetic information, and mutations often corrupt the information.

Natural Selection Topic | Answers in Genesis

Evolution and Natural Selection The process of biological evolution can be accurately defined as “descent with modification.” This definition includes microevolution (changes in allele frequency of a population over time) and macroevolution (the descent of different species from a shared common ancestor over many generations).

Evolution and Natural Selection | Biology I Laboratory Manual

Theory of Evolution by Natural Selection. A. Charles Darwin. 1. Charles Darwin was a(n) naturalist, a person who studies plants and animals by observing them. 2. Darwin was not the first to develop a theory of evolution, but his theory is the one best supported by evidence today. 3.
