Touch Of A Dom 2

The touch event interfaces support application-specific single and multi-touch interactions. However, the interfaces can be a bit tricky for programmers to use because touch events are very different from other DOM input events, such as mouse events. The application described in this guide shows how to use touch events for simple single and multi-touch interactions, the basics needed to build ...

Multi-touch interaction - Web APIs | MDN

DOM (Document Object Model) events are actions that occur as a result of the user action or as result of state change of the elements of a DOM tree. Client-side scripting languages like JavaScript , JScript , ECMAScript , VBScript , and Java can register various event handlers or listeners on the element nodes inside a DOM tree, such as in HTML ...

Today, most Web content is designed for keyboard and mouse input. However, devices with touch screens (especially portable devices) are mainstream and Web applications can either directly process touch-based input by using Touch Events or the application can use interpreted mouse events for the application input. A disadvantage to using mouse events is that they do not support concurrent user ...
